

WARNING

USE AT YOUR OWN RISK

Intended for ages 14 and up.
PixelWhip is not a children's product.
Do not modify this product.
Do not use this product for purposes
for which it was not intended.

TAKE PRECAUTIONS

Fibers can hurt when whipped around at high speed.
Maintain a safe distance around you when
using in the presence of others.

Risk of eye injury.

Wear proper eye protection.

A note from the creators of FiberFlies PixelWhip:

Thank you for purchasing PixelWhip from us! We hope the engineering, design and aesthetic of this product brings you many hours of joy!

We value presence on the dance floor, and hope you do too. While we value independent expression, we value the safety of our community even more. Therefore, we ask you to be Goodwill Ambassadors of FiberFlies; be aware of and conscientious to all the people around you at ALL TIMES.

FiberFlies can hurt others if misused. Please always maintain control over your PixelWhip: this includes educating your friends on how to use them safely, especially in crowds and when the energy is high.

FiberFlies PixelWhips Quick Start Guide

- Always repair or replace damaged or worn parts before further use.
- To prevent voiding the warranty and/or compromising safety, performance, durability, and function, we recommend you only use PixelWhip as is. Modify at your own risk; it will void the warranty.
- Stay alert and use common sense. Do Not use PixelWhip when tired, distracted, or in the presence of fragile or breakable objects.
- Do not use PixelWhip while impaired. Consult prescription labels to determine if your judgement or reflexes may be impaired by taking a particular drug; if so do not use PixelWhip.

Power

PixelWhip uses a single 18650 protected circuit Li-ion battery for power (2400mAh battery & USB charger included).

NOTE: for all Li-ion batteries, max capacity gets slightly less each time you recharge. After about 500 recharges (or less), the battery's run time may be noticeably shorter. This is natural and not covered by our warranty. You can always buy a new replacement battery for max play time.

Step 1: Insert battery with negative (-) end towards the handle's endcap.

Step 2 Press handle into main power spring inside the LED housing.

..... m 0 0''''''

CAUTION: non-protected 18650 could damage your PixelWhip. If you buy extra batteries from another source, make sure they have protected circuit.

When battery runs out, PixelWhip will blink red 3 times to indicate low power, then power off.

NOTE: When you 1st receive your PixelWhip, battery may not be fully charged.

To charge battery, plug USB charger into power source and insert battery. USB charger light will glow green once fully charged. To reach max capacity, battery may need to charge for 8hrs or more. Battery can continue to trickle charge even after green light.

Optical fiber care

The fiber-head can be easily screwed-on/unscrewed for separate storage, or to install a replacement fiber-head. (Buy extras and cut them to different lengths!)

Store and transport PixelWhip's fiberhead in bag (included) to protect from unintentional tangling and damage.

To clean and keep the fibers untangled and smoothly flowing, use small amount of silicone personal lubricant on a cloth; starting at the fiberhead, gently wiping down the length of fibers to the tips.

If radial bearing stops turning smoothly, apply a tiny amount of WD40 directly into the bearing's inner race.

IMPORTANT: Taking care not to get WD40 on fibers. Unscrew the fiber head, so you can apply WD40 from the back side. Turn the fibers in the bearing to work WD40 in.
